

Amendments to the Claims

This listing of claims replaces all prior versions, and listings, of claims in the above-identified application:

1-16. (Cancelled)

17. (Currently Amended) A dental ~~Dental~~-material comprising at least one substance whose bacteriostatic and/or bactericidal efficacy is formed in the presence of intraoral microorganisms.

18. (Currently Amended) The dental ~~Dental~~-material according to ~~Claim 1~~claim 17, whereby the formation of the efficacy is based on a modification of the substance, which is caused by an enzymatic, physical, chemical, or biochemical environmental change triggered by the intraoral microorganisms.

19. (Currently Amended) The dental ~~Dental~~-material according to ~~one of the Claim 1~~claim 17, wherein the substance is enriched and/or stored in the area between the dentin or melt and the dental material.

20. (Currently Amended) The dental ~~Dental~~-material according to ~~one of the Claim 1~~claim 17, wherein the substance is enriched by diffusion in the area between the dentin or melt and dental material.

21. (Currently Amended) The dental ~~Dental~~-material according to ~~one of the Claim 1~~claim 17, wherein the substance is hindered from diffusing from the dental material by being derivatized or being incorporated covalently-bonded in the dental material, and stored in the area between the dentine or melt and the dental material on the surface of the dental material, and by the substance being liberated locally and time-specifically due to enzymatic, physical, chemical, or biochemical environmental changes triggered from intraoral microorganisms.

22. (Currently Amended) The ~~dental~~ Dental-material according to ~~Claim-5~~claim 21, wherein the local and time-specific liberation of the substance and formation of the efficacy can be caused by the same or different enzymatic, physical, chemical, or biochemical environmental changes triggered by intraoral microorganisms.

23. (Currently Amended) The ~~dental~~ Dental-material according to ~~one of the Claim-1~~claim 21, wherein the liberation of the substance occurs based on enzymatic separation.

24. (Currently Amended) The ~~dental~~ Dental-material according to ~~one of the Claim-1~~claim 17, wherein the substance is hindered from diffusion from the dental material by being derivatized or incorporated covalently-bonded in the dental material, and is stored on the surface of the dental material in the area between the dentin or melt and dental material, and formation of the efficacy is based on a modification of the active ingredient which is caused by enzymatic, physical, chemical, or biochemical environmental changes triggered by intraoral microorganisms, whereby the substance is not liberated.

25. (Currently Amended) The ~~dental~~ Dental-material according to ~~Claim-8~~claim 24, whereby the formation of the efficacy occurs in several steps by the same or different enzymatic, physical, chemical, or biochemical environment changes triggered by intraoral microorganisms.

26. (Currently Amended) The ~~dental~~ Dental-material according to ~~Claim-8~~claim 24, wherein the substance remains hindered from diffusing from the dental material after developing the efficacy by being derivatized or incorporated covalently bonded in the dental material.

27. (Currently Amended) The ~~dental~~ Dental-material according to ~~one of the Claim-1~~claim 17, wherein the substance comprises taurolidine.

28. (Currently Amended) The dental Dental material according to one of the Claim 1-claim 17, comprising

- a) 0.01 – 10% of a substance, whose bacteriostatic and/or bactericidal efficacy is formed in the presence of intraoral microorganisms,
- b) 3 - 80% of a polymerizable component;
- c) 0.01 – 25% of typical initiators and/or accelerators and/or retarding agents;
- d) 0 – 50% of typical additives; and
- e) 0 – 90% of typical fillers.

29. (Currently Amended) The dental Dental material according to one of the Claim 1-claim 17, comprising

- f) 0.1 – 5% of a substance, whose bacteriostatic and/or bactericidal efficacy is formed in the presence of intraoral microorganisms,
- g) 3 - 80% of a polymerizable component;
- h) 0.01 – 25% of typical initiators and/or accelerators and/or retarding agents;
- i) 0 – 50% of typical additives; and
- j) 0 – 90% of typical fillers.

30. (Currently Amended) The dental Dental material according to one of the Claim 1-claim 17, comprising

- k) 0.1 – 3% of a substance, whose bacteriostatic and/or bactericidal efficacy is formed in the presence of intraoral microorganisms,
- l) 3 - 80% of a polymerizable component;
- m) 0.01 – 25% of typical initiators and/or accelerators and/or retarding agents;
- n) 0 – 50% of typical additives; and
- o) 0 – 90% of typical fillers.

Amendment and Response

Serial No.: 10/539,952

Confirmation No.: 8655

Filed: March 6, 2006

For: DENTAL MATERIAL WITH BACTERIOSTATIC AND/OR BACTERICIDAL SUBSTANCES

31. (Withdrawn) A method of making a dental material, said method comprising providing a substance whose bacteriostatic and/or bactericidal efficacy forms in the presence of intraoral microorganisms.
32. (Withdrawn) A method of making a dental molding material, a dental filling material, a glass ionomer cement, a temporary dental filling material, or a dental bonding material, said method comprising providing a substance, whose bacteriostatic and/or bactericidal efficacy forms in the presence of intraoral microorganisms.
33. (New) A dental material comprising a polymerizable component, an initiator for the polymerizable component, and taurolidine.
34. (New) A dental material comprising taurolidine, wherein the dental material is a dental filling material, a glass ionomer cement, a temporary dental filling material, or a dental impression material.
